How to Find DOIs on Crossref

By Anna Do, April 2019

In the references section for APA format, you should always cite the DOI (Digital Object Identifier) of an article if you found it online. Sometimes it’s hard to find the DOI, so CrossRef (crossref.org) helps you find the DOI for articles you need to cite.

2. Type in the name of the article you need to cite into the search bar, with quotation marks around the title. Press enter to search. It might take a few seconds to load.
3. Copy and paste the DOI link underneath your article into your references section.

Click the link to check if the DOI matches with your article. If a journal publisher uses DOIs, it will usually be printed somewhere in the article. Articles published before 2000 may not have DOIs. If you can't find a DOI on CrossRef, then you can assume that the article does not have a DOI. For a step-by-step tutorial on how to use CrossRef, check out our video on YouTube: https://youtu.be/VRrcVqtlegM
